Build a Safer, Stronger Community

We are hiring a Construction Inspector to oversee the construction of complex projects, from underground storm drain pipelines to basin pump stations. As a special purpose-district serving Fresno, Clovis, and parts of Fresno County, we manage flood control and urban stormwater management for a 400-square-mile service area with a team of 77 professionals. If you are detail-oriented, enjoy fieldwork, and want to contribute to meaningful, hands-on public service, we encourage you to apply.

What You'll Do

Construction Inspectors serve as the District's on-site technical representatives, ensuring every project meets our standards for safety, quality, and long-term performance. You will:

- Inspect all phases of construction for storm drains, pipelines, pump stations, and other public works projects to ensure full compliance with District standards.
- Lead field survey activities, review field data, and translate that data into construction drawings.
- Coordinate work plans and construction schedules and assist with securing necessary permits to keep projects moving forward.
- Interpret construction plans and drawings, coordinate field and laboratory testing of materials, and verify that the correct materials are used.
- Prepare reports and correspondence and maintain detailed project records.

Who You Are

- You value transparency, accountability, integrity, and teamwork.
- You bring strong coordination and planning skills, and you communicate effectively while remaining calm, objective, and professional in all situations.

Education

- You have a high school diploma or equivalent (*verified during the background process*).
- For Construction Inspector II and III, you also have technical training in engineering, construction drafting, surveying, or water sciences.
- You may also hold a Bachelor's degree in Civil Engineering, Industrial Technology, or related field with a construction focus, which may substitute for some general experience.

**Experience**

- Construction Inspector I: You have at least one year of experience related to public works construction.
- Construction Inspector II: You have at least three years of experience related to public works construction.
- Construction Inspector III: You have at least five years of experience related to public works construction.

Growth Within the Inspector Series

- As a small agency, we offer opportunities to advance within the Construction Inspector series (I-III). Inspectors hired at Level I can progress as they gain skills and experience, with Level III representing the top tier.

What You'll Appreciate Working Here

- Play a direct role in improving essential public infrastructure
- Join a supportive, mission-driven team
- Contribute to work that benefits the community
